Disabling Enterprise Mode in Internet Explorer 11

If the user is encountering issues with logging into the WITS interface or updating information after a recent update; inactivating Enterprise Mode will increase WITS functionality.

1. **Open Internet Explorer.** The "Enterprise Mode" blue buildings icon will appear in the address bar if it is activated. Do not attempt to log in at this point.

2. In the menu bar, **click tools and uncheck "Enterprise Mode."**

3. The blue buildings should no longer be in the address bar. Login to WITS now.
